

# Contract Volume Salon

We propose to make a website and inventory and purchasing software for Volume Salon with the following understandings:

What we propose to make and/or do:

- *Website, inventory/purchasing software to be completed and delivered by May 1, 2017*

What we need from Volume Salon to accomplish this task:

- *Access to Volume Salon current software, PC, POS, and scanner gun.*
- *Regular contact with Danielle Wareham for feedback.*

What will happen when these guidelines change:

- *Requirements naturally change during the development of a project, but these changes must be agreed upon and may affect what components are delivered in the end.*

What we expect in compensation:

- *You will be giving us a grade for our work on this project, and it will have a substantial impact on our overall grade for our Software Engineering course.*

What limitations we have:

- *We are a student team and this is a student project. This project comes with no particular guarantees, including in particular warranty or suitability for a particular purpose, or long-term support.*

Ownership and fair use of Intellectual Property:

- *The Intellectual Property created during this project (for example software, business processes, and artwork) is granted permanently for use and extension for the business owner, but is ultimately owner by the respective creator(s) who are not limited to reuse or extend this work elsewhere.*
